

GIS Services

From transportation planning and demographic analysis to new site locations and more, our Geographic Information Systems (GIS) services are not only comprehensive, they can also enhance your understanding of a specific situation to help you make more informed decisions.

SERVICES

- Statistical mapping and analysis
- Geocoding
- Data conversion and manipulation
- Location analysis
- Large-scale base map development
- Geographic application development
- Data and imagery acquisition and analysis
- 3D terrain analysis
- Database development for complex projects

"NOAA's National Marine Sanctuaries entrusted the development of their Marine Sanctuary Site Atlas to International Mapping. The resulting product is a beautiful work of art, one that effectively illustrates the diversity and geographic locations of our National Marine Sanctuary System. We could not be more pleased with our decision to work with them on this initiative."

Matt Stout – National Marine Sanctuaries

"Alex Tait and his team at International Mapping provide innovative solutions that address the thorny challenges inherent in presenting geographical and other data-intensive information in a compelling and highly usable way. They understand that elegant, thoughtful design serves an enormously powerful role in conveying complex information in an elegant fashion. The firm's technical and design expertise is combined with consistently responsive customer service and a high degree of professionalism."

John Slavney – BP
